EEl Job Number: 206023

Uitenhage Facility
Products: Jettas, Polos and Golfs
Vehicles per yr: 112,000 (approx.)

Country: South Africa
Application: Industrial
Client: Volkswagen
Capacity: 100 MMBTU/H

A Snapshot...

In the period 2000 through 2008, Volkswagen South Africa will have invested nearly 1-billion USD in new models, a new paint shop and a new truck and bus assembly plant. The strategy is now bearing fruit in terms of job creation, growth in the domestic passenger market, growth in export volumes and building the brand's presence.

For example, in 2005, VW-South Africa produced 112 000 Jettas, Polos and Golfs at its Uitenhage factory, **twice the number they made eight years ago.**

During **August 2006** a total of **44,052 new passenger cars were sold in South Africa.** This represented a new record for the total number of new car sales in a single month. In addition, it brought the year-to-date market for 2006 to a level 18% up on the January to August period for 2005.

Volkswagen sold 10,040 units during August - an all-time record for the company. This brought its year-to-date sales performance up a staggering 20% on the same period last year. The Volkswagen Commercial Vehicles Brand showed a marked improvement of 51% when comparing its year-on-year results.

In other firsts, the Volkswagen of South Africa factory recorded its **highest ever monthly production volume in 55 years when an unprecedented 12,208 units were manufactured at the factory.** Another record was shattered on August 31, when **618 units were manufactured in one day** - the best daily production performance in the company's history.

NOTE: This LPG system provides the SOLE SOURCE of fuel for the VW factory. There is NO natural gas in this region. The system includes 4 AQUA-GAS® WB-V Series Vaporizers.
